America's largest Distributor
of HMK Stone Care Products

HMK - SUPER SPECIAL

CLEAN, PROTECT, MAINTAIN

Use these products in the following order:

Deep Clean - R55 Intensive Cleaner

R55 Intensive Cleaner is used to clean natural stone in preparation for sealing. Use full strength for stain removal by pouring directly on stain. Allow to dwell on stain for 15 minutes, not allowing to dry. After 15 minutes, scrub with nylon scrubbing pad or scrub brush. Sponge up solution and triple rinse. Repeat if necessary.

If stone is relatively clean, mix R55 1 part to 4 parts water. Use a scrubbing sponge or scrub brush over a manageable area. Allow to dwell for 5-10 minutes. Sponge up solution and triple rinse. Allow to completely dry for 12 hours before sealing stone.

Impregnate - S34 Silicone Impregnator

Apply S34 with a sealer applicator brush or paint brush suitable for solvents/lacquers. Apply to manageable area (approx. 3' x 2') and allow to penetrate for 10-15 minutes, NOT allowing to dry on surface. If it is a warm day or in direct sunlight, apply more S34 to area to stay wet for maximum penetration.

Wipe off excess product with clean dry white cloth. Our Disposable Microfiber Wiping Cloths are the perfect option for removing

excess product. Use a separate cloth to buff area to a complete shine, removing all streaks and haze. Move on to adjacent areas and repeat process.

Maintain - P24 Liquid Stone Soap

Use P24 as a daily cleaner for countertops and as a maintenance cleaner for mopping stone floors.

Countertops: Mix one capful of P24 in a 16 oz. Spray Bottle, filling with filtered water if available. Simply spray area and wipe off with a clean dry towel to buff dry. This is a No Rinse product.

Floors: Dilute 1/4-1/2 cup (2-4 oz.) of P24 per each 2 1/2 gallons, 10 liters of clean water. Damp mop floor, frequently wringing mop in same bucket of solution. Do not re-mop each area. When water becomes soiled, replace it at same dilution. Do not rinse protective film.

Option: For occasional polishing, we offer HMK **P19 Marble and Granite Polish** (Concentrated for mixing with water) and also **P21 Polishing Paste** for surface waxing and conditioning.
